Algebra Section 1.7

Pages 43-48

Goal: "I will graph ordered pairs (x,y) "

"I will graph functions and visualize trends"

"Determine if a graph represents a function based on the 'vertical line test'"

Graphing Functions:

Example:

Graph the function $y = 3x - 2$ with a domain of 0, 1, 2, 3.

Make a table with the given domain and input each value to find the output and complete the table

Input (x)	0	1	2	3
Output (y)	-2	1	4	7

Write coordinate pairs with the given domain and range

(0 , -2)

(1 , 1)

(2 , 4)

(3 , 7)

Plot the points

Try These:

a) Graph the function $y = 2x - 3$ with a domain of 2, 3, 4, 5

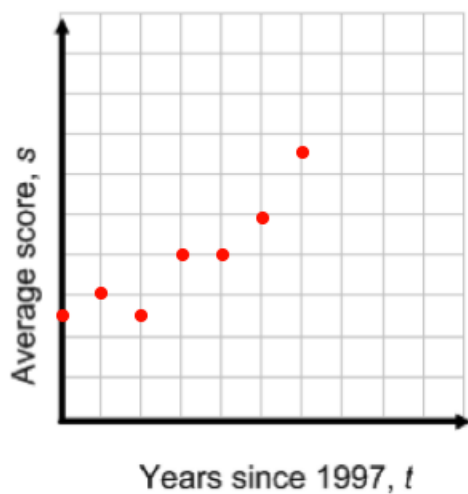

b) Graph the function $y = 2x - 1$ with a domain of 1, 2, 3, 4, 5

c) The table shows the average score, s , on the mathematics section of the SAT in the United States from 1997 to 2003 as a function of time, t , since 1997. In the table, 0 corresponds to the year 1997, 1 to 1998 and so on. Graph the function. What trend, if any, do you notice?

Years since 1997, t	0	1	2	3	4	5	6
Average score, s	511	512	511	514	514	516	519

For each graph given, write a rule for the function, then identify the domain and range.

Make a table first

Input	1	2	3	4	5
Output	2	3	4	5	6

Rule: $y = x + 1$
 Domain: 1, 2, 3, 4, 5
 Range: 2, 3, 4, 5, 6

Rule: $y = x - 1$
 Domain: 1, 3, 5, 7
 Range: 0, 2, 4, 6

Rule: $y = 5 - x$
 Domain: 0, 1, 2, 3, 4
 Range: 5, 4, 3, 2, 1

Rule: $y = 5x + 5$
 Domain: 1, 2, 3, 4
 Range: 10, 15, 20, 25
